

AEGIS Architecture. Legal Risk Management for AI.

The Abu Dhabi ruling held a law firm personally accountable for AI hallucinations. Your firm could be next.

CONFIDENTIAL

The Problem

Courts are now holding professionals accountable for AI-generated errors. The law firm in Abu Dhabi paid \$77,000.

The precedent is set. Your jurisdiction could be next.

\$77,000

The Solution

AEGIS is a deployable, repeatable framework that prevents AI-generated errors from reaching a court, a client, or a regulator.

It is not a policy. It is architecture.

What AEGIS Includes

- Audit protocols for AI-assisted legal research
- Chain of custody for AI-generated citations
- Approval workflows before filing
- Guardrails that prevent unverified outputs from being used

This is not a webinar. It is a deployable, repeatable framework for law firms that cannot afford a \$77,000 mistake.

AEGIS is offered through CBSeGroup, a San Francisco Bay Area technology advisory firm.
